

**NAME**

apv1v — PDF/DJVU/EPUB/HTML/TXT viewer with vim-like behaviour

**SYNOPSIS**

**apv1v** [options] [file]

**DESCRIPTION**

apv1v is a PDF/DJVU/EPUB/HTML/TXT viewer, which behaves like vim.

**OPTIONS**

-c *file*

Load configuration from *file* instead of the default *%.apv1vrc*

-h

Show help message and exit

-v

Show version and exit

**COMMANDS**

The following command keys can be used inside apv1v. Some of them may be prefixed by a number (as in pressing "13G"), this is indicated by a *count* in their description. Unless noted otherwise, the default value for the number is 1.

- o        Display file chooser to open a PDF/DJVU/EPUB/HTML/TXT file
- O        Select a directory to display
- t        Display file chooser to open a PDF/DJVU/EPUB/HTML/TXT file in a new tab
- T        Select a directory to display in a new tab
- R        Reload the current file
- r        Rotate the document clockwise by 90 degrees
- G        Show page number *count*
- gt       Show next tab
- gT       Show previous tab
- PageDown, C-f        Go forward *count* pages
- PageUp, C-b        Go backward *count* pages
- C-d       Go forward *count* half pages
- C-u       Go backward *count* half pages
- H        Scroll to page head
- M        Scroll to page middle
- L        Scroll to page bottom
- s        skip some pages *count*
- C-p, Up, k        Scroll up *count* units
- C-n, Down, h        Scroll down *count* units

Backspace, Left, h  
     Scroll left *count* units

Space, Right, l  
     Scroll right *count* units

## PROMPT

Like the COMMANDS, but prefixed with a colon:

:h[elp]   Display the help document

:q[uit]   Close the current window

:o[pen] *file*  
    Open *file*

:doc *file*  
    Load *file* into the current window

:TOtext [*file*]  
    Translate *file* (or the current page) to a text file

:pr[int]   Print the current document

:tabnew   Create a new tab

:sp       Horizontally split the current window

:vsp       Vertically split the current window

:fp, :forwardpage [*int*]  
    Go forward *int* pages (1 by default)

:bp, :prewardpage [*int*]  
    Go backward *int* pages (1 by default)

:g, :goto *int*  
    Go to page *int*

:z[oom] *mode*  
    Set zoom to *mode* (see "set zoom" in SETTINGS)

:*int*      Go to page *int*

:content   toggle content display

## AUTHORS

apvlv was written by Alf <naihe2010@126.com>.

This manual page was originally written by Stefan Ritter <xeno@thehappy.de> for the Debian project (but may be used by others), and was rewritten more beautifully by Daniel Friesel <foobar@derf.home-linux.org>.
